

THE PLACEMAT (POINT-AND-SHOW)

01 · BUILT

What we've built to date

*The analytical layer Dealum lacks*

- Working end-to-end deal pipeline: **7 stages · 8 commands · 9 AI agents · 10 proprietary frameworks**
- Single user. One deal at a time. Real deals through to scored DD Reports + Investment Memos.
- Filesystem-first; Dealum overlay only. Three surfaces (Desktop, CLI, Cowork).

02 · BUILD

What we need to build

*Deal intel + member intel · web*

- **V1 (30–45 days): two tracks at once** — deal intel (the 9 agents on the web) + member intel substrate (graph, ledger, Match Engine, social deal card).
- **V2 (~3 months):** onboard Medical · Space · Consumer · Industrial · Fintech. 2 weeks per group.
- **V3+ ecosystem sourcing.** Dealum stays through V2; platform subsumes Beyond V3.

03 · ENTERPRISE-GRADE

Desktop tool → always-on platform

*Four dimensions: reliability · multi-user · Dealum · security*

- From session-dependent desktop → **cloud always-on**. Deals processed when they enter Dealum, not when I'm at my Mac.
- **Multi-user:** right output to right member at right stage. Structured SME input replaces email + ad-hoc.
- **Bidirectional Dealum integration.** Encryption + RBAC + append-only audit. Member data rights from day one.

04 · THE MOAT

Member intelligence platform

*Beyond deals — the compounding asset*

- Deal intelligence is the wedge. **Member intelligence is the asset.**
- Substrate = Sensors + Member Graph + Decisions Ledger + Policy + Learning Loop. Append-only; compounds.
- 200 members · 6 groups · 20+ years of indexed IC reasoning. **No vendor can sell us this. No competitor can copy it.**
- AI is the connective tissue. The substrate is the moat.
