AFFIRM Continuous Monitoring Framework

AFFIRM Continuous Monitoring

AI Asset: GPT-4 API, Claude, Gemini, Custom, Models, Internal LLMs

TEST SCHEDULER
Hourly, Daily, Real-time

EVALUATORS
- Hallucination
- Bias Detection
- Toxicity
- Relevance
- Drift & More

Test Execution & Evaluation

Baseline Comparison

Threshold Comparison

Alert Generation

MULTI-PLATFORM ITSM INTEGARATION

STRUCTURED ALERT PAYLOAD

- Alert ID, Timestamp, Severity
- AI Asset, Evaluator, Metric Value
- Threshold, Deviation, Root Cause Hint
- Remediation Guidance

MSP and AFFIRM Value Proposition

What is your deployed AI system outputting - is it safe, fair, compliant, and accurate?

The Problem:

AI monitoring is scattered across three types of tools:

- **infrastructure**,
- **MLOps**
- **Code security**

Each handles only part of the picture. None tells you whether your AI system is:

- **Safe**
- **Fair**
- **Compliant**
- **Accurate**
- **Security**

The Solution

Proactive vs. Reactive	Detect AI issues before they cause customer-facing incidents or compliance violations
Automated Evidence Collection	Every test result stored with immutable audit trails for compliance reporting
Reduced MTTD	Mean Time to Detect AI drift/issues reduced from days to hours
Operational Efficiency	10,000+ automated tests monthly replace manual spot-checking
Integration with Existing Workflows	Leverages client ITSM investments (ServiceNow, Jira, BMC) vs. standalone tool
Scalability	Monitor AI assets with consistent standards
